

ELYSÉA checks every AI answer of an application, and declares its gaps before any inspection.

ELYSÉA is an ethical cognitive infrastructure, embedded through an integration kit (SDK) in a builder's application; it does not talk to people, it checks every exchange before and after the model, and it declares its gaps.

WHAT YOU SUPERVISE

- The AI Act, enforced since 2026-08-02 (emotion inference banned at work and in schools since 2025-02-02); data protection under the CNIL and the Swiss Federal Data Protection and Information Commissioner (FDPIC).^{1,2,3,4}

QUALIFICATION AND OPERATION

- Neither a general-purpose model nor a high-risk system; the information obligation applies from placing on the market.
- Four prohibitions checked on every answer, which cannot be switched off; referral to public numbers; per-answer attestation.
- Compared with common content filters: prohibitions on conduct towards the person, and a trace for every answer.^{5,6}

VERIFIABLE, AND DECLARED GAPS

- **Provided on request:** impact assessment (authorised under conditions, thirty blocking measures), register, procedures, list of processors (region proven for five); read access to the code and to the protocol, written and sealed on 2026-08-28, amended since.
- **Gaps:** paths to services possibly outside the EU on the deployed service, transfer basis not established, partly removed in the upcoming version; a voice path for emotion analysis, removed together with voice; impact assessment and contracts not signed; data protection officer not appointed; representative in the Union not appointed; neither a vulnerability disclosure policy nor a third-party audit; customer key not enabled.
- No measurement result to date; no opening before the thirty measures are proven on the deployed service.

NEXT STEP

Every request for information receives a written answer; read access is given on request. Details: *Authorities* document, two pages. contact@elysea.app · elysea.app
